

Sanjana Sri Injamuri

Boston, MA | (774) 465-9562 | injamuri.s@northeastern.edu | [LinkedIn](#) | [GitHub](#) | [sanjanainjamuri.com](#)

EDUCATION

Northeastern University, Khoury College of Computer Sciences
Master of Science in Computer Science

Boston, MA
Expected May 2027

Anurag University
Bachelor of Technology in Computer Science

Hyderabad, India
2025

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, Go, SQL

Machine Learning & AI: PyTorch, TensorFlow, scikit-learn, NumPy, Pandas; Deep Learning (CNNs, Transformers), NLP, Computer Vision (YOLO, OpenCV); LLM integration (Claude API), model training & evaluation

Web & Backend: React, Vite, Node.js, Express, Prisma, React Router, REST APIs

Databases & Cloud: PostgreSQL, AWS, Vercel, Railway, Git

Security & Systems: End-to-end encryption (libsodium/NaCl, Argon2), Ed25519, HKDF, probabilistic data structures

PROJECTS

Overturn, Founder | *AI Insurance-Appeals Platform* | [github.com/Sanjana-sun/overturn](#) 2026

- An AI platform I built to appeal denied insurance claims and flag medical-bill errors. A **Claude API** pipeline classifies the denial, drafts the appeal letter, and extracts billing errors from the documents.
- Wrote the backend: **39 REST endpoints across 9 services**, plus an **eval harness** that scores model output as prompts change. Added **five role-based portals** (patient, clinician, provider, employer, admin), a clinician review queue, and Stripe billing; the outside integrations stay off until configured.

DocLink, Founder & Full-Stack Engineer | [doclink.in](#) 2026

- Built and launched **doclink.in** solo: a live doctor-collaboration platform with **75+ REST endpoints** over a **14-model PostgreSQL database** (Prisma), about **13,500 lines** of React and Node on Vercel and Railway, translated into **16 languages**.
- Case sharing is **end-to-end encrypted** in the browser: Argon2-derived keypairs and NaCl `crypto_box`, with a separate wrapped key per case, so the server never holds plaintext patient data. Reused the same backend and database for **MedLink**, a student app served under a path-based route.

On-Device INT8 Image Classifier | [github.com/Sanjana-sun/edge-vision-quant](#) 2026

- Trained a small CNN from scratch, then quantized it to **INT8** (static PTQ, qnnpack/ARM backend). The result is **3.78× smaller and ~1.8× faster** on CPU with almost no accuracy loss (91.6% → 91.4% on FashionMNIST). Includes the full train, quantize, and evaluate pipeline.

Selective-Disclosure Identity Wallet | [github.com/Sanjana-sun/identity-wallet](#) 2026

- A verification protocol (**Ed25519, HKDF**) that proves a single attribute without revealing anything else. Each site gets its own derived key so the same user can't be linked across sites; I tested it against tampering, replay, and duplicate-signup attacks.

Real-Time DDoS Detection for On-Device / IoT Edge | [github.com/Sanjana-sun/ddos-detection](#) 2026

- A streaming detector for memory-constrained IoT devices that trades exact $O(n)$ counting for fixed-memory approximations: **Bloom filter, Count-Min Sketch, HyperLogLog, and Misra-Gries**.

EXPERIENCE

Teaching Assistant, CS 5800 Algorithms, Northeastern University

Boston, MA

- Held office hours and graded for a graduate algorithms course covering divide-and-conquer, dynamic programming, graphs, greedy methods, and complexity.

Neuromatch Academy, Computational Neuroscience Research

2026

- Research program on real neural datasets: data analysis, statistical model fitting, and computational modeling in Python, NumPy, and PyTorch.

Member, AI/ML & IoT Clubs

2025

- Built and shipped small ML and IoT projects, mostly hands-on prototyping and connecting hardware to software.

PUBLICATIONS

- Gesture-Based Control System**, [journaleims.com](#) (2024): a real-time hand-gesture control system in Python, MediaPipe, and OpenCV, aimed at HCI and accessibility.
- Publication Summary Generator for Academicians**, Paper ID 2025011115 (2025): a tool that pulls papers from Google Scholar and Scopus and summarizes them with an LLM, cutting literature-review time by **~40%**.

AWARDS

- 1st place, TEJAS 2K24** (gesture-controlled virtual canvas)
- 1st place, AI Med Quest** (tumor-detection chatbot)
- 1st place, IoT Hackathon** (agriculture IoT)
- 2nd place, 3D Gaming Bootcamp** (FPS game)

CERTIFICATIONS

- Google Machine Learning Crash Course (2025)
- Claude 101, Anthropic (2026)
- [AWS Cloud Practitioner Essentials](#) (2025)
- Go, Intermediate, HackerRank (2026)
- [Full-Stack Engineer, Skillssoft](#) (2025)
- [Fortinet Certified Associate, Cybersecurity](#) (2026)
- [CCNA: Enterprise Networking, Security & Automation, Cisco](#) (2024)
- [Google Cybersecurity](#) (2024)

ACTIVITIES

Member, Northeastern University Archery Team (2026); competed in tournament play and earned a **black achievement pin**.
