

Sanjana Sri Injamuri

Boston, MA | inajmuri.s@northeastern.edu | [LinkedIn](#) | [GitHub](#) | [sanjanainjamuri.com](#)

EDUCATION

Northeastern University, Khoury College of Computer Sciences, Boston, MA
Master of Science in Computer Science

Expected Dec 2027

Anurag University, Hyderabad, India
Bachelor of Technology in Computer Science

2025

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, Go

Databases: PostgreSQL

Cloud Technologies: AWS, Vercel, Railway

Frameworks & Tools: React, Vite, Node.js, Express, Prisma, Git

Libraries: PyTorch, TensorFlow, scikit-learn, BERT/DistilBERT, YOLO

PROJECTS

Founder & Full-Stack Developer, DocLink [doclink.in](#)

2026

Independent Project[April 2026] - Present

- Designed and built DocLink, a blockchain-verified doctor collaboration platform, end-to-end using React + Vite (Vercel) and Node.js + Express + Prisma + PostgreSQL (Railway)
- Implemented end-to-end encryption with libsodium and Argon2 to secure sensitive medical communications between practitioners

Selective-Disclosure Identity Wallet

2026

- Built a privacy-preserving verification protocol using Ed25519 signatures and HKDF-based key derivation, letting sites verify one attribute without exposing personal data
- Derived a separate cryptographic key per relying party for unlinkability across sites; confirmed with automated tests covering tamper detection, replay attacks, and duplicate-signup prevention

MedLink (DocLink Student Platform)

2026

- Engineered a student-facing companion platform to DocLink, served at doclink.in/students via path-based Vercel routing while sharing the same backend and PostgreSQL database
- Set up an independent React + Vite frontend repo with its own routing (basename-scoped React Router) so students and doctors share cases and solutions across platforms without a duplicated codebase

Real-Time DDoS Detection for IoT Edge Devices

2026

- Developed a probabilistic streaming pipeline (Bloom filter, Count-Min Sketch, HyperLogLog, Misra-Gries) for real-time DDoS detection on memory-constrained IoT devices, replacing an O(n) exact-counting baseline with fixed-memory approximation.

PROFESSIONAL EXPERIENCE

Teaching Assistant, CS 5800 Algorithms at Northeastern University

Present

Work extensively with core algorithmic paradigms and engage deeply with algorithm design and analysis.

Neuromatch Academy Computational Neuroscience

2026

Worked extensively with neural data analysis and computational modeling techniques as part of an intensive, research-oriented curriculum in computational neuroscience

AI/ML & IoT Clubs

2025

Dove deeply into prototyping and deployment workflows across ML and IoT projects, spanning applied AI techniques, project development, and hardware-software integration

PUBLICATIONS

Gesture-Based Control System <https://journaleims.com/gesture-based-control-system/>

2024

Developed a real-time hand gesture recognition system using Python, PyTorch, and OpenCV, achieving 95% accuracy in controlling interactive interfaces for HCI and healthcare applications, enhancing accessibility and user engagement.

Publication Summary Generator for Academicians Paper ID: 2025011115

2025

Built a BERT-based tool to generate academic summaries, improving research efficiency by 40%.

CERTIFICATIONS

Fortinet Certified Associate Cybersecurity

2026

Full-Stack Engineer by skillssoft

2025

Machine Learning Crash Course by Google

2025

Google Cybersecurity

2024

ACHIEVEMENTS AND AWARDS

TEJAS 2K24, Achieved first position for designing. a Hand Gestures-based Virtual Canvas

2024

3D Gaming Boot Camp, Earned second place by developing a first-person shooter game

2023

AI MED QUEST, Secured first prize by creating a tumor-detecting chatbot

2023

IOT Hackathon, Won the IoT Hackathon by developing an innovative IoT application for agriculture

2022
